First- and second-generation PFC emulsions for use as intravascular oxygen carriers and tissue oxygenation fluids (so-called 'blood substitutes'). A blood substitute is a substance used to mimic and fulfill some functions of biological blood. It aims to provide an alternative to blood transfusion, which is transferring blood or blood-based products from one person into another. Thus far, there are no well-accepted oxygen-carrying blood substitutes, blood substitutes being pursued are hemoglobin-based oxygen carriers. Jean G. Second-generation perfluorochemical emulsions are available and in clinical trials as temporary intravascular oxygen carriers during surgery, thereby reducing . Many blood substitutes utilize natural hemoglobin chemistry to achieve oxygen transport, and are termed hemo- globin-based oxygen carriers (HBOC) decades to produce viable hemoglobin (Hb)-based oxygen carriers Keywords: hemoglobin; blood substitutes; sickle cell disease; heme. The attempt to develop a viable blood substitute spans more than 7 decades. of hemoglobin and are known as hemoglobin-based oxygen carriers (HBOCs). However, to date, no oxygen-carrying blood substitutes are. First generation of artificial red blood cell (RBC) substitutes. Novel microparticle carriers augment oxygen levels within the blood stream. Other articles where Synthetic oxygen carrier is discussed: blood doping: Synthetic been explored as oxygen carriers in blood-substitute products for purposes. One type of artificial blood substitute that scientists have studied extensively is called a "hemoglobin-based oxygen carrier" (HBOC). HBOCs.
